DFP SPLICER S-1800 DRIVE-FIT SPLICING SLEEVE REQUIRES NO WELDING

Cut costs and speed installation by eliminating delays caused by butt welding pipe piles.

Cutaway view shows taper which creates a tight friction joint.

- Available for all standard sizes of pipe piling
- Carefully sized for reliability; no misfits or rejects
- Creates a tight friction joint with no welding required
- Speeds production; at the same time requiring smaller crew
- Eases alignment: application to vertical and batter piles
- Splicer slips on driven pile while next length is picked up (be sure pipe ends are square)
- Speeds welding where required for unusual conditions
- Structural dependability affirmed by increasing acceptance by highway departments and engineers everywhere
- Proven economy; thousands used optionally by contractors each year
